Section		Page
	Preface	7
01	The $\text{Na}^+$ , $\text{K}^+$ pump and its discovery	9
02	The Transport and distribution of $\text{Na}^+$ and $\text{K}^+$ in skeletal muscle and how they are quantified	14
03	Rapid passive fluxes of $\text{Na}^+$ and $\text{K}^+$ start muscle contraction and set a limit to excitability	17
04	The definition, structure and function of the $\text{Na}^+$ , $\text{K}^+$ -pump	27
05	The synthesis and localization of the $\text{Na}^+$ , $\text{K}^+$ pumps in skeletal muscle	29
06	Measurements of the content of [ $^3\text{H}$ ]ouabain binding sites indicate that in skeletal muscle, the major part of these binding sites of the $\text{Na}^+$ , $\text{K}^+$ pumps are localized on the outer surface of sarcolemma and in the t-tubules	30
07	The content of $\text{Na}^+$ , $\text{K}^+$ pumps in skeletal muscles and how it can be quantified	34
08	Muscle contractions, $\text{Na}^+$ , $\text{K}^+$ transport and sodium potassium fatigue	41
09	The rate of [ $^3\text{H}$ ]ouabain binding to sarcolemma can be quantified and what information may this provide?	43
10	Measurements of [ $^3\text{H}$ ]ouabain binding to other cell types and preparations	44
11	Acute and long-term regulation of $\text{Na}^+$ , $\text{K}^+$ pumps in skeletal muscle	50
12	Catecholamines and caffeine	57

Section	Page	
13	Peptide hormones stimulating the Na <sup>+</sup> , K <sup>+</sup> pumps	60
14	Insulin-like growth Factor-I (IGF-I)	64
15	CGRP and other calcitonins	67
16	Amylin, related peptides, and other stimuli for the Na <sup>+</sup> , K <sup>+</sup> -pumps	69
17	The importance of Na <sup>+</sup> -influx in causing depolarization and muscle fatigue	72
18	Effect of varying Na <sup>+</sup> , K <sup>+</sup> -pump stimulating agents on intracellular Na <sup>+</sup> in rat soleus muscles and how this may compensate functional defects caused by plasma membrane leakage	75
19	Long-Term Regulation of Na <sup>+</sup> , K <sup>+</sup> Pump Content	77
20	Training, inactivity and denervation	79
21	Muscular dystrophy and McArdle disease	81
22	Hyperkalemic periodic paralysis in horses, human subjects and mutant mice with a similar genetic anomaly	88
23	K <sup>+</sup> deficiency and K <sup>+</sup> restoration	93
24	Thyroid hormones and starvation	96
25	Thermogenic actions of thyroid hormones and malignant hyperthermia (MH)	99
26	Diabetes	100
27	Steroid hormones, Glucocorticoids, Aldosterone	102
28	Major Conclusions and General Perspectives	104
	References	107
